

Guess the missing number

	<u>Supplies</u>
	*Deck of number cards 1-16

Players: 2

GR K Practiced Skill:

Number sense: understanding values of numbers and ordering them.

Directions:

1. Mix up the cards.
2. One person takes the deck puts it behind their back, to remove one card, keeping it hidden from the other person.
3. The other person takes the remaining deck of cards and puts them in numerical order (like a number line) to find the missing card and then “guesses” the number of the missing card.

Modifications:

- To make the game more challenging, the person “guessing” the missing card can take the deck from the other player and instead of putting the cards in numerical order (like a number line) just spread them out on the table and point to each number in order while counting in order to find the missing card.
- To make it even more challenging do the same thing as above, but count in your head.
- Make more number cards at home and use cards 1-30.
- Use the higher number cards that you have made at home and only use cards 10-30, putting the other cards aside. Or start at an odder number i.e. 15-30.

Key Concepts in Spanish:

Saying the numbers in Spanish!!!
